

# Earth day

Last Friday 22nd of April, our nursery brought alive one of our ethos "Loving the planet" with stimulating activities to celebrate Earth day. From sensory trays and art/crafts with sustainable materials to small world play, introducing the concept of pollution in the ocean. We also organised a few trips during the week to continue emphasizing the importance of outdoor learning.

Have a look at all the learning opportunities our children faced in this special event.

Our baby room have explored different textures, temperatures and practiced their fine motor skills with sensory trays, also watering the plants in the garden.

Our toddler room has celebrated the day with sustainable crafts from recycle materials. They previously collected different twigs from the local parks to represent a forest and keep improving their fine motor skills. The children naturally spoke about the changes in the environment, colours and the importance of the three R's: reduce, reuse and recycle.

Our preschool room continued celebrating Earth day with different art and crafts, and enriching their vocabulary with tricky words and concept such as POLLUTION. They even had a special table decorated for the occasion.
