

# Zoolab visit

This April we welcomed back “Zoolab” to continue offering our children more cultural capital experiences. This was an incredible opportunity for our children to learn about the different animals around the world and how to take care of them. In this occasion, we learnt about rats, Giants African snails, millipedes, frogs, cockroach, scorpions and snakes. We could gently pat some of the animals, observed their characteristic and learn more about their habitats and diet. Look at all the fantastic learning at Monkey Puzzle Highbury!

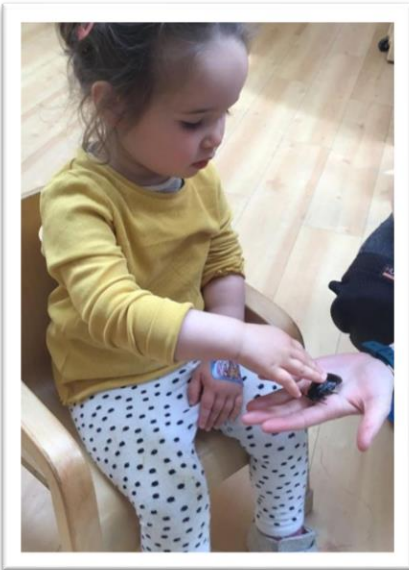

**FUN FACT**  
*Giant African Snail*  
are nocturnal,  
moving around at  
night to feed.

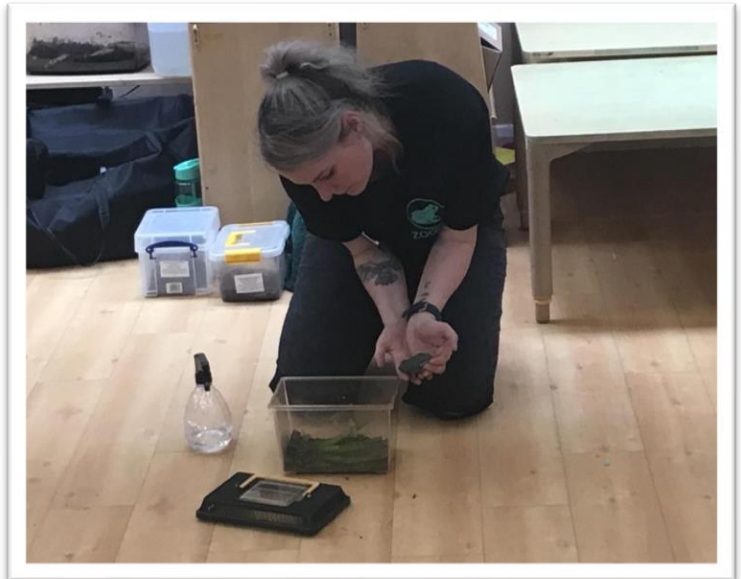

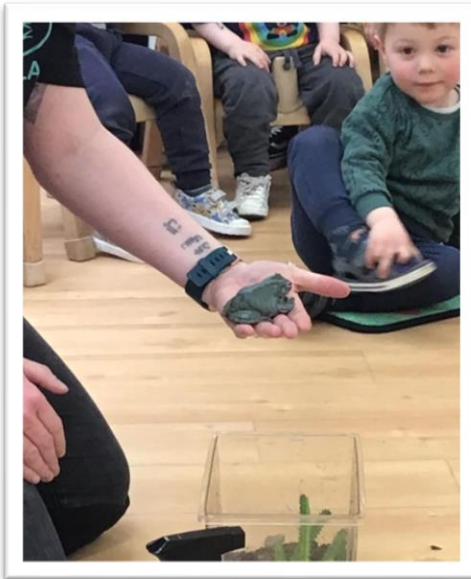

**FUN FACT**  
*Madagascar cockroach* hiss when they exhale air through their breathing holes

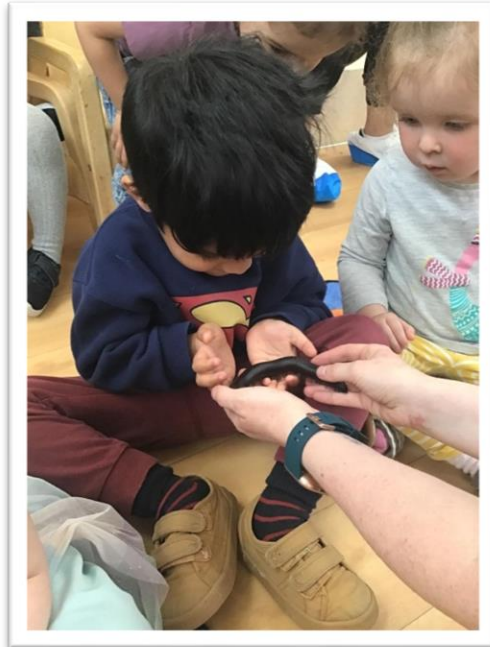

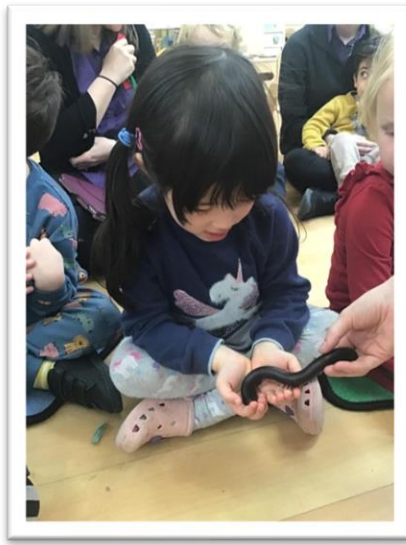

## **FUN FACT**

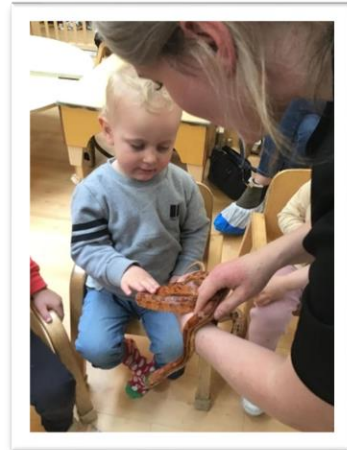

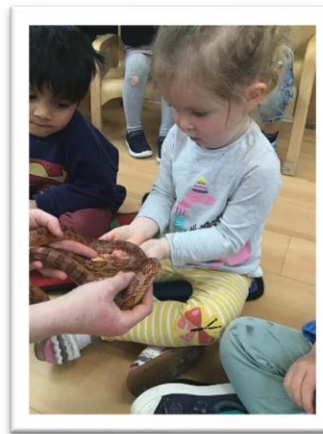

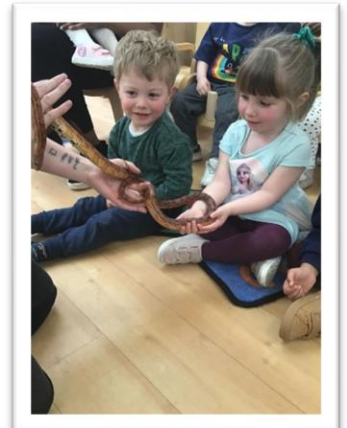

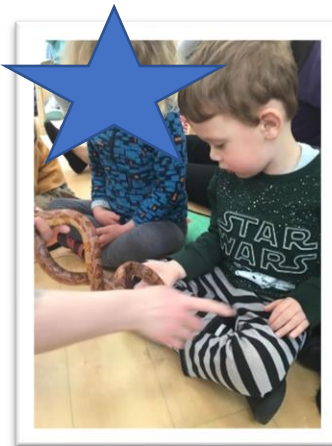

**White tree frogs**  
Females can lay up  
to 150 - 300 eggs

## FUN FACT

*Giant African Millipedes*  
only has about 300 to 400  
legs

**FUN FACT**

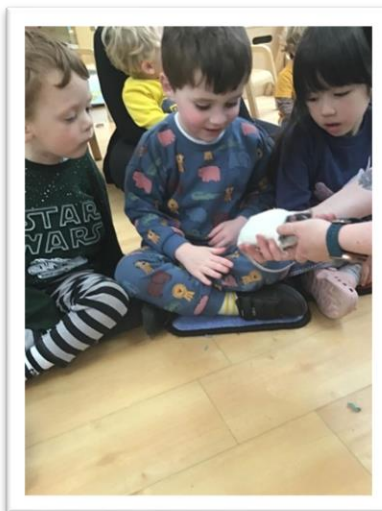

**Corn snake** colours depend on the environment to work as camouflage. The pattern on their belly gives their name.

## FUN FACT

*Asian forest Scorpions* are carnivorous and have a diet consisting in live insects

## FUN FACT

**Rats** are very social and will take care of injured and sick rats in their group
